Novelty (N)	Claims	_____	YES
	Claims	<u>1-8</u>	NO
Inventive step (IS)	Claims	_____	YES

2. Citations and explanations:

Document 1: EP 0946070 A2 (NEC CORPORATION) 29 September 1999

The inventions of claims 1-8 are described in paragraphs 0103-0113, 0129-0130 and 0133-0137 in document 1 cited in the ISR; thus they do not appear to possess novelty or involve an inventive step.

In the invention of document 1, when a signal for controlling upstream transmission power which is sent from a base station is lower than the SIR threshold value of the downstream line, the signal is subject to be ignored. Therefore, in the invention described in document 1, upstream transmission power is clearly found to be determined solely based on upstream transmission power specification information from the base station, whose quality is better than the specified communication quality.

In addition, in the invention of document 1, the transmission power is controlled based on control instruction to make the transmission power lower at the base station, when different control instructions are received from a plurality of the base stations. Therefore, in the invention of document 1 as well, it is clear that determination is made such that the upstream transmission power is increased if all instructions instruct to increase the upstream transmission power, and determination is made such that the upstream transmission power is lowered if at least one instruction instructs to lower the upstream transmission power.
